### TECHNICAL DATA SHEET

# CT PowderRange 625 S

### Introduction

PowderRange metal Additive Manufacturing powders from Carpenter Additive are developed with the needs of the busy AM facility in mind.

- ► Easy ordering
- Standard specifications
- ▶ 24-hour shipment
- ► Sold in easy-to-handle multiples of 10 kgs
- Easy repeat orders to optimize inventory management

This leaves you free to concentrate on the design and build of your AM parts, confident that PowderRange metal AM powders from Carpenter Additive will add reliability and consistency to your AM built parts.

#### Characteristics

PowderRange 625 S Nickel Chromium Alloy is a Ni-Cr superalloy with significant mass fractions of molybdenum and niobium. The addition of molybdenum and niobium gives the alloy high strength and toughness in the annealed condition. Although it can be precipitation strengthened, it is considered a solid solution strengthened superalloy. As a consequence, it has superior properties in the 'as processed' state with Laser Powder Bed Fusion relative to PowderRange 718 that requires additional heat-treating steps to achieve maximum mechanical properties.

## **Applications**

PowderRange 625 has a wide range of applications within aerospace, automotive and the marine industry, and its particularly suitable for applications where corrosion and oxidation resistance at high temperatures is required.

## **Chemical composition**

| Element |                    | Minimum wt% | Maximum wt% |
|---------|--------------------|-------------|-------------|
| Al      | Aluminum           |             | 0.40        |
| С       | Carbon             |             | 0.10        |
| Со      | Cobalt             |             | 1.0         |
| Cr      | Chromium           | 20.0        | 23.0        |
| Cu      | Copper             |             | 0.50        |
| Fe      | Iron               |             | 5.0         |
| Mn      | Manganese          |             | 0.50        |
| Мо      | Molybdenum         | 8.0         | 10.0        |
| N       | Nitrogen           |             | 0.02        |
| Nb+Ta   | Niobium + Tantalum | 3.15        | 4.15        |
| Ni      | Nickel             | Balance     |             |
| 0       | Oxygen             |             | 0.03        |
| Р       | Phosphorus         |             | 0.015       |
| S       | Sulfur             |             | 0.015       |
| Si      | Silicon            |             | 0.50        |
| Ti      | Titanium           |             | 0.40        |

# Particle size distribution – CT PowderRange 625 S

| Size   | Value       | Method                 |
|--------|-------------|------------------------|
| -15 μm | 10 Volume % | Laser Size Diffraction |
| +45 μm | 15 Weight % | Sieve Analysis         |
| D10    | 10-18 µm    | Laser Size Diffraction |
| D50    | 26-28 µm    | Laser Size Diffraction |

## Mechanical properties (indicative only)

| Property                             |                                    | As built                      |
|--------------------------------------|------------------------------------|-------------------------------|
| Tensile Strength [1]                 | Horizontal<br>Direction (XY)       | 950 - 1050 MPa<br>138-152 ksi |
|                                      | Vertical Direction<br>(Z)          | 875 - 950 MPa<br>127-138 ksi  |
| Yield Strength [1]                   | Horizontal<br>Direction (XY)       | 700 - 750 MPa<br>102-109 ksi  |
| note Strongth [1]                    | Vertical Direction<br>(Z)          | 575 - 625 MPa<br>83-91 ksi    |
| Young's Modulus [1]                  | Horizontal<br>Direction (XY)       | 165 - 185 GPa<br>24-27 msi    |
| roung's Modulus [1]                  | Vertical Direction<br>(Z)          | 135 - 155 GPa<br>20-22 msi    |
| Elongation [1]                       | Horizontal<br>Direction (XY)       | 30 - 35 %                     |
| Etongation [1]                       | Vertical Direction<br>(Z)          | 35 - 45 %                     |
| Hardness [2]                         | 300 - 330 HV0.5                    |                               |
| Coefficient of Thermal Expansion [3] | $12.8 \times 10^{-6} \text{ m/mK}$ |                               |
| Thermal Conductivity [3]             | 9 - 10.5 W/mK                      |                               |

- 1. As built. Mechanical testing in accordance with ISO 6892
- 2. As built. Hardness test in accordance with ASTM E384-11
- 3. In the range of  $20^{\circ}$ C ( $68^{\circ}$ F) to  $100^{\circ}$ C ( $212^{\circ}$ F)

Range of mechanical properties encompasses expected values across multiple machine platforms

### **Ordering information**

CT PowderRange 625 is available from stock and dispatched within 24 hours of receipt of order. Our PowderRange metal AM powders are sold in multiples of 10 kgs giving you the flexibility to order just the volume you need to maintain efficient material stock levels.

All our PowderRange materials are supplied with a full metal powder certification to Carpenter Additive's standard material specification, reporting size distribution, flow, chemistry and morphology.

| Code                 | Description                                   | Unit volumes |
|----------------------|---|--------------|
| CT PowderRange 625 S | Standard Laser Powder Bed Fusion metal powder | 10 kgs       |
